India

Project Summary	
Building Type	Industrial
Main Contractor	Klearon
MEP Contractor	Pentas Engg Pune
Services	HVAC, Electrical and Lighting

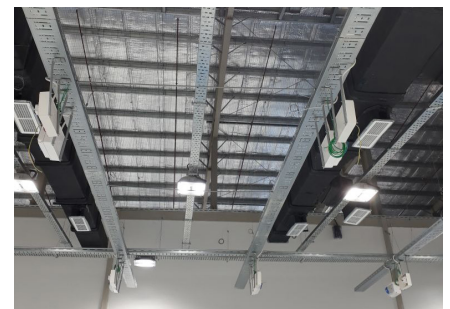

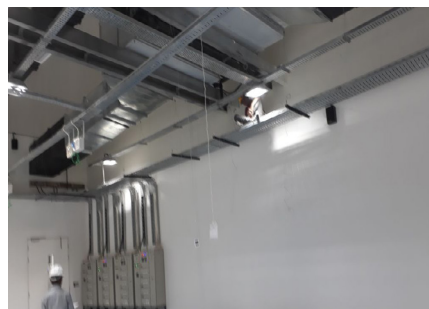

Featured Products	
 <p>Y-Fit</p>	 <p>Standard Hanger</p>

PROJECT DETAILS

Prestigious technology company Honeywell has expanded their operations in India with the development of a new industrial shed in Phulgaon Pune Industrial Zone. The 5,936 sq.m shed had HVAC ducts, light fixtures and cable tray suspended with Gripple hanging kits.

Gripple was ideal for this project as it was a fast-track project which had tight deadlines. The ready-to-use kits offered enormous time saving benefits over traditional methods. The drop length of 6 m also made the Gripple hanging solution cost effective. In addition, the client liked the aesthetic look in the open ceilings.

Gripple worked with the project team from the start to the end of the project including undertaking technical design support. The drawings were submitted to Gripple from the MEP contractor and a total solution was designed and delivered. This service saved on design time, and the ease of installation meant that the project could be completed in a timely manner and delivered on time.

“The main benefits of the Gripple hanging system were ease of installation which allowed for speedy work, a better aesthetic look compared to traditional hanging systems, and the design support that was provided by the Gripple team.”

- Mr.Rajkumar - Design Incharge and Santosh Lunkad - Project Incharge, Pentas Engg -
